INDIMUMS Customer Data Analysis Report

# INTRODUCTION

...

This report analyzes 500 customer orders to identify key trends in product demand, city-wise performance, and marketing channels.

# DATASET OVERVIEW

- Total Rows:500
- Total Columns:7
- Missing Values:None
- Duplicate Order Number:None
- Unique Customer:18
- Unique Products:4
- UNique Cities:8
- Columns

Overview:order\_no,customer\_name,city,zipcode  
product\_purchased,quantity\_purchased

# APPROACH

1. I first looked at the dataset structure to understand what columns and data were included.
2. I checked for missing values or duplicates to make sure the data was clean.
3. I used Pandas for simple data checks like viewing the data, counting values, and summarizing columns.
4. I analyzed the quantity column to see how many units customers usually buy.
5. I examined the categories (cities, products, and marketing channels) to find the most common ones.
6. Based on these observations, I summarized the key insights and gave simple recommendations.

## KEY FINDINGS

### Numeric Insights

- The average quantity ordered is around 2–3 units.
- Most customers usually buy 2 units.
- The smallest order size is 1 unit and the largest is 4 units.

Interpretation from above stats:

Customers generally place small orders, usually between 1 and 3 units.

# Categorical Insights

## Top Cities by Orders:

- Kolkata - 74 orders
- Ahmedabad - 70 orders
- Delhi - 69 orders
- Mumbai - 68 orders
- Hyderabad - 60 orders

## Top Products:

- Baby laundry - 209 orders
- Baby shampoo - 178 orders
- Baby bodywash - 65 orders
- Baby handwash - 48 orders

## Marketing Channels:

- WhatsApp - 131
- Facebook - 131
- Instagram - 125
- Google - 113

## Additional Observations

- Only 18 customers placed 500 orders – meaning many customers are repeat buyers.
- Demand is concentrated on only two main products.
- Orders come mostly from a few cities, showing strong regional demand.

## BUSINESS INTERPRETATION

- Strong demand for baby laundry and baby shampoo means these products drive most sales.
- Since top cities contribute the bulk of orders, focusing advertising here will bring faster results.
- Balanced marketing channel usage shows that the brand is reaching customers through multiple touchpoints.
- Small and consistent order quantities mean inventory planning becomes easier.

## RECOMMENDATIONS

1. Focus marketing on the top-selling products (baby laundry and shampoo).
2. Run targeted ads or offers in the top cities.
3. Test different marketing channels to see which performs best.
4. Offer simple product bundles to increase order value.
5. Give small rewards or discounts to repeat customers.
6. Keep enough stock of high-demand products to avoid shortages.

# INDIMUMS CUSTOMER ORDER DASHBOARD

## INDIMUMS-Customer Order Dashboard

500

Count of order\_no

18

Count of customer\_name

8

Count of city

Count of order\_no by city

Count of order\_no by product\_purchased

Count of order\_no by marketing\_channel

Count of order\_no by qty\_purchased

## CONCLUSION

The data shows strong demand for a few key products and specific cities. Focusing marketing and inventory on these areas can bring better results. With simple tests and targeted campaigns, the business can improve conversions and increase order value.
